Integrated Headsets

Panasonic Headsets

Even in today's modern fast-moving office environment many telephone users continue to risk discomfort and even injury taking telephone calls on a handset and trying to write notes or operate a computer at the same time. A headset frees both hands and allows for correct, comfortable posture at all times.

The TC-200 Active Integrated Headset has been specifically designed for telephony applications with the most popular range of telephone systems in the UK. Whichever headset you select from our range you will find them all rugged yet comfortable, light yet durable and of course, 100% crystal clear.

Comfort & Clarity

Apart from being ultra-reliable, durable and efficient we have striven to make sure that all our headsets are comfortable and stylish to meet the demands of the professional user. These headsets are well balanced, lightweight and have even ear pad pressure to prevent operator discomfort and fatigue. The noise reduction technology employed in the earphones and microphones guarantee perfect performance and unequalled audio speech quality.

A specific lead is now available to simply plug and play with all Panasonic PBX DECT Handsets.

TC-200 Active Integrated Headset

The TC-200 provides the user with a lightweight, comfortable, and durable headset, but above all gives the optimum in sound quality. The unique "Dove Tail" on the Monaural headset is designed to sit higher on the head ensuring greater comfort over longer periods. The microphone boom arm has a 3 position positive memory combined with semi-rigid nylon material, this ensures that the correct position of the microphone is maintained allowing the noise cancelling microphone to operate at its greatest efficiency. The material selection of ABS, acetal, and nylon are all non-hydroscopic and prevent bacterial growth, making the headset hygienic and easy to maintain.

Sonata Active Integrated Headset

The Sonata is an ultra-lightweight active integrated headset with a fully adjustable ear-hook. Like the TC-200, it has been developed to deliver outstanding quality hand in hand with durability and exceptional operator comfort. The Sonata is also a stand-alone headset requiring no additional amplifier keeping desk clutter to a minimum and eliminating the need for batteries.

A Headset Box enables the user to make full use of both headset and handset. The switch also incorporates a headset mute facility.
